DETAILED ACTION

1. Applicant's amendment and accompanying remarks filed April 25, 2007 are acknowledged.
2. The rejection of claims 1-7 and 22 under 35 U.S.C. 102(b) as being anticipated by Kirmanen et al., U.S. Patent Number 5,585,038 is withdrawn due to applicant's argument.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Hsu, U.S. Patent Number 6,756,474.

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C.

102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Hsu discloses an aqueous composition comprising a polyaniline comprising an aniline monomer selected from

(see reference claim 12) and a sulfonic

acid.

Double Patenting

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re*

Art Unit: 1774

Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-7 and 22 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 5, 7-10, 14-15 and 17-18 of copending Application No. 10/814,917. Although the conflicting claims are not identical, they are not patentably distinct from each other because both recite a composition comprising an aqueous dispersion of at least one conductive polymer such as polyaniline and at least one colloid-forming polymeric acid wherein the polymer is polyaniline that comprises formulae

Art Unit: 1774

Additionally, both applications recite that the colloid forming polymeric acid can be a fluorinated polymeric sulfonic acid (see claims 7-9). Also, both applications recite that the composition is used in a buffer layer.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claims 1-5 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 12 and 17 of U.S. Patent No. 6,756,474. Although the conflicting claims are not identical, they are not patentably distinct from each other because both the present application and the patented reference recite an aqueous composition comprising a polyaniline comprising an aniline monomer selected from

Art Unit: 1774

and a sulfonic acid.

Response to Arguments

6. Applicant's arguments with respect to claims 1-7 and 22 have been considered but are moot in view of the new ground(s) of rejection.
